New SC-based Biotech Company, Bridge to Life, Supplying Organ Preservation Solution to LifePoint

Columbia/Charleston, SC - April 28, 2009: Bridge to Life (BTL), a new Columbia, South Carolina-based biotech company, celebrated the delivery of its first order of Belzer UW Cold Storage Solution to LifePoint, Inc., the Charleston-based Organ Procurement Organization for South Carolina.

"This is a great day for Bridge to Life. Shipping our product to LifePoint represents a major milestone in the company's life, and we couldn't have been more pleased to have our first product go to the great people at LifePoint, and I want to thank Nancy Kay, the Executive Director of LifePoint for her support," said John Bruens, Chief Commercial Officer at Bridge to Life.

Belzer UW Cold Storage Solution is used in the procurement, storage, and shipping of human organs for transplantation. BTL was the first company to gain FDA approval for the room-temperature storage of cold storage solutions, which results in a significant savings to organ procurement organizations, reduces greenhouse gases associated with shipping of the solutions, and eliminates much of the waste seen with the other major solution manufacturers.

"LifePoint is very excited to partner with Bridge to Life," said Nancy A. Kay, LifePoint President and CEO. "We see this as a collaboration that is a win-win for our organization as well as all South Carolinians who are waiting for a life-saving transplant. We look forward to working with Bridge to Life in advancing the research for organ preservation and improving the long-term outcomes in organ transplantation."

About Bridge to Life

Bridge to Life Ltd. is a development/commercialization-stage biotechnology company formed to advance the science of organ preservation and to develop, manufacture and sell groundbreaking medical technologies. The company is a leading manufacturer of specialty medical solutions, offering services and products to the organ transplant community, as well as to physicians, hospitals and research institutions.

The company is also pursuing other advances in the organ procurement and storage market, as well as the improved organ viability segment. Bridge to Life's liposomal ATP technology will significantly increase the amount of time an organ can be stored prior to transplant and improve the overall number of viable organs that can be procured.

About LifePoint

LifePoint, Inc. is the designated Organ Procurement Organization (OPO) for organ recovery services in South Carolina. LifePoint actively provides organ, tissue and ocular donor services to 63 hospitals throughout the state. LifePoint also helps support and educate families at an emotionally devastating time so that they can make well-informed decisions about organ and tissue donation.
